

Concrete Structures: Managing The Cost And Risk Of Ownership Proceedings Of A Seminar Held On Tuesda

사회복지서비스 전달체계 발전을 위한 국가간 비교 심포지엄

he Case Management on Family at Cris's project. This is regarded as a new approach to strengthen the public responsibility responding to the necessity of social welfare support and, accordingly, its purpose is welcomed. However, there are concerns about it that it creates an overlapping issue with the private welfare institutions' case management. Also required is an integrated system covering the work process of the social welfare professionals at the local governments.

The closely connected projects such as Dream Start for Children and Case Management for self-support, which are previously installed, have to be included under the comprehensive support programs for the public policy.

Most of all, based on the above-mentioned changes, the social service delivery demands the following requirements:

First, properly oriented to human service;

Second, sensitive to the desires of the recipients and easy to utilize;

Third, able to provide the various allowances and services tailored to the desires of the recipients;

Fourth, intended to enhance the efficiency through the integrated service and management system;

Fifth, creating the environment where various parties in the private sectors and local communities actively engage in the service; and

Sixth, securing responsibility on the human resources for the service provision and management of personnel, finance, projects and recipients.

Therefore, the main challenge is to create an environment for the social service delivery where the administration can select the recipients for the cash allowances in an accurate and effective fashion, detect the comprehensive demands from all the different recipients and provide an integrated and flexible service. For that matter, the following has to be reviewed in the first place.

First, the welfare administration of the local government, which has concentrated on the distribution of allowances and the asset survey, can change to the service-oriented one. The reorganization of separating the distribution of cash allowances and the welfare service can be reviewed. In a broader sense, various reforms can be sought for: the existing public delivery system can remain unchanged while its inside divisions and work assignments is to be reorganized; a new delivery organization can be installed, separated from or integrated into the existing one. To decide, there are certain problems to be addressed. To begin with, while Social Welfare Information Management System leads the local government to manage all the welfare allowances of the related public agencies, the selection of the recipients for cash allowances and distribution of the allowances will more rely on the computerization system in the future. Next, the management system for the social welfare service is extremely scattered and, as a result, an integrated support to the recipients are not possible. For instance, Long-term Care for the Elderly, a core social welfare service, and Personal Assistance Service for the physically challenged, which is planned to carry out from the next year, are supervised by National Health Insurance Corporation and National Pension Service respectively. Lastly, the management of the less privileged who has difficulty in getting a job is shared by the Ministry of Health, Welfare and Family Affairs and the Ministry of Employment and Labor. It is recommended to refer to the advanced countries where they strongly try to connect the security of income and employment support into the frontline delivery system.

Second, the foundation for case management can be built based on the local community, following the strengthened function of service coordination in order to organize the demand and supply in each local community. Recently, an integration of the community services is being considered for case management and network organization (Young-jong Kim, 2010: 116). In this context, the public responsibility management, which has played
